OPEN FIRES CATALOGUE 2014

Kingsworthy Foundry is perhaps best known for its large range of open fireplace equipment and accessories.

From the smallest victorian opening to the largest inglenook, you're sure to find what you're looking for and with most items available from stock we promise the best before, during and after sales service!

Most of our cast iron firebacks are copies of authentic originals, some of which date back to the sixteenth century – and are ideal for those wishing to maintain the historical charm of their home. Sizes range from 16” wide right up to the ‘Royal Oak’ at 42” wide which we believe to be the largest of its type available in the country! Our firebaskets are available in a range of sizes to compliment the firebacks. Cast in iron – they are ideal for burning logs. We also hold a selection of handmade wrought iron baskets with replaceable cast iron grids making them suitable for logs and coal. We also have a wide selection of firedogs to help complete your perfect open fire.

We mean it when we say we have every type of fire tool, companion set, log basket and fire screen available from stock.

Sizes: As most items are handmade, sizes can vary. If size is critical, please check. Colours: All items are painted black unless otherwise stated.

DID YOU KNOW?

Firebacks and firedogs were first made in the early 16th Century, initially as a sideline of the foundries which were engaged in casting cannons. They came into general use when it became the norm to place the fire against a wall instead of in the middle of the room. It was necessary to protect the wall from the heat and it was discovered that a fireback reflected the heat into the room instead of absorbing it as the brick and stone did.

Firedogs were originally designed for log burning. They had a horizontal bar, a foot at one end and a pillar at the other end to support the logs and prevent them from rolling off. Some had hooks on the front to hold a spit, while others incorporated cup-holders to warm drink such as mulled wine. From the 16th century, firedogs became more and more decorative with rings, figures and family shields. Accessories for fireplaces have been introduced over time, moving from a logburning fire which tended itself and was burnt to the floor, to coal which needed more tending. Fenders were introduced, more tools and then baskets, as coal burns better with air circulating around it. Kingsworthy Foundry offer a choice of firebacks, grates, screens, companion sets and accessories from one source, with many exclusive designs included.

CAST IRON FIREBACKS

(Dimensions equals width x height)

K4 Large Lion & Unicorn
£900.00 - 39" x 31" 167kg

K6 Coat of Arms 1635
£218.00 - 23.5" x 20" 35kg

K6P Plain Fireback
£218.00 - 24.25" x 20" 48kg

K43F Plain Fleur de Lys
£144.00 - 23" x 17" 21kg

K9 Tree of Life
£194.00 - 19.5" x 28.75" 35kg

K13 Laughing Lion
£405.00 - 29" x 26" 71kg

K13P Plain Fireback
£395.00 - 29.75" x 26.75" 57kg

K58F Std Fleur de Lys
£78.00 - 18" x 14" 12kg
K59F Med Fleur de Lys
£107.00 - 21.75" x 14.25" 16kg

K22 Royal Oak
£640.00 - 33.5" x 28.75" 118kg

K22L Royal Oak Large
£1099.00 - 42.25" x 33" 192kg

K37 Rope Twist
£237.00 - 26.25" x 20" 44kg

K57F Mini Fleur de Lys
£69.00 - 15.5" x 10.75" 9kg

We understand the importance of coming back to a cosy home.

Replacement Grid - £36.50

Firedogs are used as ornamental supports for Dog Grate/Baskets. Consideration should be given to the extra width required in a fireplace opening to accommodate the feet span of the Dogs.

Cast Iron Dogs can, if preferred be used without a Dog Basket. Seasoned logs can be lent against the cross bars and burnt on the hearth base, providing there is a good draw in the chimney.

Firebaskets for Firedogs
Dimensions do not include Firedogs where shown. Depending on choice, Firedogs will lift these Baskets approximately 6" / 7" and extend the width of the ensemble by 6" to 12"

A18	Medium Loose Bar	11" x 1.25"	£10.25	1kg

NOTES

- The purpose of a fireback is to protect the rear brickwork and help to radiate more heat into the room.
- Generally the fireback is just leant against the rear brickwork.
- When choosing a fireback, the width should be the same or wider than the width of the firebasket.
- It is permissible to use firebricks to raise the height of the fireback. We recommend that no more than 1 brick high should be used.
- For solid fuel we recommend normal household coal but under no circumstances should petroleum based fuels be used.
- When burning wood ensure the wood is at least 1 year old and moisture content is less than 20%. This will help prevent soot/tar build up in the flue or chimney. When using a solid fuel or wood burning firebasket, ensure there is sufficient air gap around the appliance. We recommend a gap of 1.5" - 2" between the sides and between the back of the basket and brickwork or fireplace whichever is applicable. Leave a larger gap for baskets over 3ft (1m).
- Prevent excessive ash build-up under the basket as this can "cook" and subsequently burn out the cast iron grid base sections prematurely.
- To maintain the black appearance of the firebacks and baskets you can use the traditional method of "black leading" by applying a graphite polish, or re-paint using black heat-resistant stove / grate paint. No finish except vitreous enamel will withstand the heat of a real fire therefore paint discolouration of the fireback or basket during use is normal.
